

Amazon Apparel Recommendations

[4.2] Data and Code:

<https://drive.google.com/open?id=0BwNkduBnePt2VWhCYXhMV3p4dTg> (<https://drive.google.com/open?id=0BwNkduBnePt2VWhCYXhMV3p4dTg>)

[4.3] Overview of the data

In [0]: *#import all the necessary packages.*

```
from PIL import Image
import requests
from io import BytesIO
import matplotlib.pyplot as plt
import numpy as np
import pandas as pd
import warnings
from bs4 import BeautifulSoup
from nltk.corpus import stopwords
from nltk.tokenize import word_tokenize
import nltk
import math
import time
import re
import os
import seaborn as sns
from collections import Counter
from sklearn.feature_extraction.text import CountVectorizer
from sklearn.feature_extraction.text import TfidfVectorizer
from sklearn.metrics.pairwise import cosine_similarity
from sklearn.metrics import pairwise_distances
from matplotlib import gridspec
from scipy.sparse import hstack
import plotly
import plotly.figure_factory as ff
from plotly.graph_objs import Scatter, Layout

plotly.offline.init_notebook_mode(connected=True)
warnings.filterwarnings("ignore")
```

In [0]: *# we have give a json file which consists of all information about
the products
Loading the data using pandas' read_json file.
data = pd.read_json('tops_fashion.json')*

```
In [0]: print ('Number of data points : ', data.shape[0], \
'Number of features/variables:', data.shape[1])
```

```
Number of data points : 183138 Number of features/variables: 19
```

Terminology:

What is a dataset?

Rows and columns

Data-point

Feature/variable

```
In [0]: # each product/item has 19 features in the raw dataset.
data.columns # prints column-names or feature-names.
```

```
Out[35]: Index(['asin', 'author', 'availability', 'availability_type', 'brand', 'color',
       'editorial_review', 'editorial_review', 'formatted_price',
       'large_image_url', 'manufacturer', 'medium_image_url', 'model',
       'product_type_name', 'publisher', 'reviews', 'sku', 'small_image_url',
       'title'],
      dtype='object')
```

Of these 19 features, we will be using only 6 features here.

1. asin (Amazon standard identification number)
2. brand (brand to which the product belongs to)
3. color (Color information of apparel, it can contain many colors as a value ex: red and black stripes)
4. product_type_name (type of the apparel, ex: SHIRT/TSHIRT)
5. medium_image_url (url of the image)
6. title (title of the product.)
7. formatted_price (price of the product)

```
In [0]: data = data[['asin', 'brand', 'color', 'medium_image_url', 'product_type_name', 'title', 'formatted_price']]
```

```
In [0]: print ('Number of data points : ', data.shape[0], \
           'Number of features:', data.shape[1])
data.head() # prints the top rows in the table.
```

Number of data points : 183138 Number of features: 7

Out[37]:

top          Nakoda Cotton Self Print Straight Kurti For Women
freq                           77
Name: title, dtype: object
```

```
In [0]: data.to_pickle('pickels/180k_apparel_data')
```

We save data files at every major step in our processing in "pickle" files. If you are stuck anywhere (or) if some code takes too long to run on your laptop, you may use the pickle files we give you to speed things up.

```
In [0]: # consider products which have price information  
# data['formatted_price'].isnull() => gives the information  
#about the dataframe row's which have null values price == None/NULL  
data = data.loc[~data['formatted_price'].isnull()]  
print('Number of data points After eliminating price=NULL :', data.shape[0])
```

Number of data points After eliminating price=NULL : 28395

```
In [0]: # consider products which have color information  
# data['color'].isnull() => gives the information about the dataframe row's which have null values price == None  
data = data.loc[~data['color'].isnull()]  
print('Number of data points After eliminating color=NULL :', data.shape[0])
```

Number of data points After eliminating color=NULL : 28385

We brought down the number of data points from 183K to 28K.

We are processing only 28K points so to do things in a reasonable amount of time.

```
In [0]: data.to_pickle('pickels/28k_apparel_data')
```

In [0]: # You can download all these 28k images using this code below.
You do NOT need to run this code and hence it is commented.

```
...  
from PIL import Image  
import requests  
from io import BytesIO  
  
for index, row in images.iterrows():  
    url = row['large_image_url']  
    response = requests.get(url)  
    img = Image.open(BytesIO(response.content))  
    img.save('images/28k_images/'+row['asin']+'.jpeg')  
  
...
```

Out[52]: "\nfrom PIL import Image\nimport requests\nfrom io import BytesIO\n\nfor index, row in images.iterrows():\nurl = row['large_image_url']\n response = requests.get(url)\n img = Image.open(BytesIO(response.\ncontent))\n img.save('workshop/images/28k_images/'+row['asin']+'.jpeg')\n\n"

[5.2] Remove near duplicate items

[5.2.1] Understand about duplicates.

In [0]: # read data from pickle file from previous stage
data = pd.read_pickle('pickels/28k_apparel_data')

find number of products that have duplicate titles.
print(sum(data.duplicated('title')))
we have 2325 products which have same title but different color

2325

These shirts are exactly same except in size (S, M,L,XL)

These shirts exactly same except in color

In our data there are many duplicate products like the above examples, we need to de-dupe them for better results.

[5.2.2] Remove duplicates : Part 1

```
In [0]: # read data from pickle file from previous stage
data = pd.read_pickle('pickels/28k_apparel_data')
```

In [0]: `data.head()`

# in this project we are using a pretrained model by google
# its 3.3G file, once you load this into your memory
# it occupies ~9Gb, so please do this step only if you have >12G of ram
# we will provide a pickle file which contains a dict ,
# and it contains all our corpus words as keys and model[word] as values
# To use this code-snippet, download "GoogleNews-vectors-negative300.bin"
# from https://drive.google.com/file/d/0B7XkCwpI5KDYNLNUTTlSS21pQmM/edit
# it's 1.9GB in size.

...
model = KeyedVectors.load_word2vec_format('GoogleNews-vectors-negative300.bin', binary=True)
...

#if you do NOT have RAM >= 12GB, use the code below.
with open('word2vec_model', 'rb') as handle:
    model = pickle.load(handle)

[10.2] Keras and Tensorflow to extract features

```
In [0]: import numpy as np
from keras.preprocessing.image import ImageDataGenerator
from keras.models import Sequential
from keras.layers import Dropout, Flatten, Dense
from keras import applications
from sklearn.metrics import pairwise_distances
import matplotlib.pyplot as plt
import requests
from PIL import Image
import pandas as pd
import pickle
```

Using TensorFlow backend.

```
